OZARU

HOW TO CLEAN TILE GROUT

WITH OZARU GROUT CLEANER

Follow these six steps for a cleaner, fresher-looking tiled surface.

WORK IN SMALL, MANAGEABLE SECTIONS FOR BEST CONTROL.

1 PREPARE THE SURFACE

Sweep, vacuum or wipe away loose dirt, dust and debris before cleaning. This prevents loose grit from being worked across the tiles.

2 APPLY OZARU

Apply OZARU directly to the grout lines and the area being cleaned. Work section by section so each area is completed before moving on.

Test new, delicate or unfamiliar surfaces on a small hidden area first.

3 WAIT 1 MINUTE

Allow OZARU to sit for one minute to help loosen built-up dirt and grime. Keep the treated section wet while the product works.

IMPORTANT: Do not allow the product to dry on the tile or grout.

4 SCRUB THE GROUT

Use a stiff-bristled grout brush and scrub in small circular motions. Focus on visible dirt and grime. Let the product and brush do the work.

Use gentle pressure on cracked, loose or weakened grout.

5 RINSE THOROUGHLY

Rinse with plenty of clean water to remove OZARU, loosened dirt and all residue. Use fresh water when rinsing heavily soiled areas.

6 DRY AND INSPECT

Wipe the area dry with a clean cloth or towel and inspect the grout. If an area still needs attention, repeat the cleaning process gently.

! IMPORTANT SURFACE INFORMATION

- For ceramic and porcelain tiles only.
- Always test on a small, hidden area first.
- Do not use on natural stone, cement/concrete tiles, metal surfaces or decorative glazed tiles.
